# LSPrint Getting Started Guide and Quick Configuration

### Welcome to LSPrint - https://lsapp.ca/lsprint.

Once you are through with the following guide, all your Lightspeed eCom orders will print out automatically on your Star Micro mC-Print2 or mC-Print3 thermal printer like magic. You should be done with the whole setup in less than 30 minutes.

### **Check your requirements:**

- 1. A Lightspeed eCom account which you can access with an administrator role.
- 2. To use LSPrint with your Lightspeed eCom account, you must have an Advanced or Professional Lightspeed account.
- 3. One of the following two thermal printer models:
  - a. Star Micro printer mC-Print2
  - b. Star Micro printer mC-Print3
- 4. A LAN connection for the printer
- 5. A thermal paper roll loaded into your printer
- 6. Your store logo if you'd like to have it printed on your receipts

- 1. Account Type: Change things like payment method, reset your password and other account-related operations
- Lightspeed Shop ID: Set your Lightspeed Shop ID to link your Lightspeed eCom Store to your LSPrint account. <u>This is an important setting</u> and will allow LSPrint to store your eCom orders and print them to your thermal printer as they come in through your eCom store.
- 3. Current Active Printer: Use this page to see all printers that have an active connection to your LSPrint account. By default, you will see no printers in your LSPrint account until you setup your printer accordingly (more on that further down in the instructions)
- 4. **Print Jobs**: This is your print queue and will show you all order that have been placed by your clients on your eCom store.
- 5. **Timezone**: By default, your time zone will be UTC. Change your time zone so you can see proper times in the print queue and on your printed receipts.
- 6. **Company Logo**: This is optional and allows you to upload your company or store logo to LSPrint so it shows on your printed receipts.
- 7. Lightspeed API/Webhook: *This is an important setting* and is what will allow Lightspeed eCom to send each order placed on your eCom store to LSPrint
- 8. **Print Job Counts:** Shows you how many print jobs (or eCom orders) have printed and how many are waiting to be printed.
- CloudPRNT Link: <u>This is an important setting</u> and is the URL that you will copy in your printer's configuration (more ton that further down in the instructions)

## **Setup Process - Step 1: Lightspeed Shop ID**

Before your thermal printer can start printing your orders automatically, you need to configure a few things...

The first is to find your Lightspeed eCom Shop ID and copy that number into your LSPrint account.

You can find your Shop ID by visiting your Lightspeed eCom's Admin page. This is usually your eCom's web address followed by a "/admin" for example: <u>https://myecomstore.com/admin</u> n (replace "myecomstore.com" with your eCom store's address)

From any page in eCom Admin, click on the Help button at the bottom left and you will see your "Store ID". Copy this number.

Go back to LS Print and either click on the gear icon next to "Lightspeed Shop ID" on your Dashboard page or use the "Settings" menu in the top navbar to go to the "Lightspeed Shop ID" page. Here, you will have to enter your own Lightspeed Shop ID.

Paste your Lightspeed Shop ID that you found in the previous step, in your LSPrint "New Shop ID" field and then click on "Save"

## **Setup Process - Step 2: Lightspeed API**

While still logged in to your Lightspeed eCom Admin page, we will be creating the API key and secret that will be used to generate the trigger that will send every order from your eCom store to LSPrint. This is a crutial part of LSPrint and it is essential to the system because it will not work without it.

### From your Lightspeed eCom's Admin page:

- 1. Click on "Settings" at the bottom left of the screen
- 2. Then, click on "Developers" under the "Store Settings" section
- 3. In the next page, click on the blue "New API key" button
- In the popop, enter a title for your new API key. You can use "LSPrint" as an example
- 5. Click on the green "Save" button

Paste your Lightspeed API Key and API Secret into your LSPrint configuration page.

Access the API configuration page by clicking on the "Settings" menu item in the top navigation bar and by clicking on "Lightspeed API/Webhook":

Then, enter your API key and your API secret EXACTLY as shown in your Lightspeed eCom Admin page from the previous step.

Save your changes.

## **Setup Process - Step 3: Printer Configuration**

Now that your Lightspeed eCom account is connected to your LSPrint account, it is time to connect your thermal printer to your LSPrint account.

First, please confirm you have either a Star Micro printer mC-Print2 or a Star Micro printer mC-Print3. <u>No other printer will work</u> with LSPrint.

Connect your printer to power and to your network using a LAN cable. Install a paper roll as indicated in the printer's instructions.

Then, turn off the printer by holding the power button for about 1 second.

Make sure all the lights on the front panel are OFF.

Next, we will be printing the configuration sheet from your printer which will help you in identifying its IP address so you can connect to its setup environment.

While holding down the FEED button (1), press the POWER button, and release it. Continue holding the FEED button until the printer starts printing.

You should get 2 printouts. The second printout will show you the current IP parameters at the very bottom. Look for the "IP Address"

********************************

LSPrint <u>BETA</u> - <u>https://lsapp.ca/lsprint</u>

Connect to your printer's setup environment.

Using the paper that printed in the last step, identify the IP address of your printer and open a browser window (Google Chrome, Firefox, Edge, etc.) and navigate to that address. For example, if the printer address is 192.168.1.5, then enter that in the address bar at the top of the browser window and hit the ENTER key on your keyboard.

Please note that the default username and password for your printer is "root" and "public".

Once you are connected to your printer's setup environment, do the following:

- Click on the "CloudPRNT" link in the left navigation menu
- Change the "CloudPRNT" setting to "ENABLE"
- 3. Enter your LSPrint CloudPRNT URL as found on your LSPrint Dashboard (see above section called Overview of LSPrint Dashboard, item 9) in the "Server URL"
- Leave the "Polling time" to 60
- 5. Click on the blue "submit" button

## **Setup Process - Step 4: Activate Printer**

I you configured your printer properly in "Step 3", then after a few seconds, your printer will communicate with your LSPrint account and send along some information about itself.

Log back into your LSPrint account and click on the "Setting" menu in the top navication bar and then click on "Printer Setup":

Make sure the MAC address matches your printer's MAC address as noted in Step 3, section 4 above.

If everything matches, click on the green "Authorize Printer" button and your Lightspeed eCom orders will start printing as soon as they come through.

your orders will start printing as

soon as they come through your Lightspeed eCom store.
